## Bilateral Meetings

- (10:00 am - 4:00 pm)

### Description

For over a hundred years now we have specialised in the manufacture and sale of class EN GJL 150 and EN GJL 200 grey cast iron sewage system elements. A construction material used not only out of necessity or due to the inexpensive nature of the casting process, grey cast iron with flake graphite is presently regaining its popularity since it offers unique advantage such as very high corrosion resistance, good thermal conduction, effective vibration damping and good potential for machining. The above qualities truly justify our choice of grey cast iron as the primary material for the manufacture of sewage system components and guarantee their superior quality. Our company offers one of the most modern casting automatic lines with modern technological facilities ensuring the stability of the production process in Europe. We have one of the highest quality line with vertical form division which can be used in all iron castings for any industry. The Flaskless Moulding Line - 2015 has: -The output: 400 forms per hour (coreless manufacturing) -350 forms per hour (core-based manufacturing) -Form size: 550x675x120-400 -AMC/SBS conveyor (70 m) -Weight of casts: 0.1 kg - 30 kg

### Organization Type

Company

Country

Poland

City

26-200 Końskie, ul. 1 Maja 57 [Google map](#)

Areas of Activities

**Sewage treatment plants**
