Bilateral Meetings

- (10:00 am - 4:00 pm)

Description

The composting of sewage sludge in membrane technology -GORE® Cover.

GORE® Cover System is aerobic waste treatment technology using a special tilt Gore membrane. This method provides the most effective solution available on the market in the field of biological treatment of waste and it meets the most stringent regulations on emissions of odor.

The advantages of this system are:

-using the most advanced technology currently available based on many technologies previously used separately, - it is almost as efficient as composting in open windrows while management of the process is just as safe as in the case of closed systems using highly engineered solutions. The use of this technology meets the requirements of most of the authorities and have their required licenses, -these features make it ideal for the treatment of biological waste and agricultural waste, where it is desirable to high-end product, -permit issuing authorities in many European countries have classified GORE® Cover, as a closed system. Even the German authorities, widely recognized as one of the more stringent, are classified GORE® Cover composting system, a closed structure, when it comes to dealing with household waste.

Organization Type

Company

Organization Size

1-10

Founding Year

2008

Country

Poland

City

Łódź, Karolewska 38/40 [Google map](#)

Areas of Activities

Sewage treatment plants
